

Skunk Bath Remedy

Mix the following ingredients in a two quart container:

- 1 quart of 3% Hydrogen Peroxide
- $\frac{1}{4}$ cup of baking soda
- 1 tablespoon of liquid dish soap

Place pet in bathtub. Make sure and thoroughly wet the pet's fur with water before pouring on solution. Doing this will allow the solution to penetrate the coat and not run off, due to natural oils on the fur. Carefully pour the solution over the pet, making sure it does not get in or near their eyes. Let mixture stay on your pet for atleast 5 minutes and then rinse off with warm water. Make up a new mixture and re-apply if needed. Discard any leftover solution as baking soda and peroxide will create oxygen and the container could burst!
